PROFILE

AI Engineer who takes LLM features from idea to production: AI agents with tool calling, RAG pipelines and knowledge bases, streaming AI APIs and realtime voice. I lead a team of 4 engineers migrating a live AI agent to a new multi-tenant agent platform, and I am a founding engineer at an AI data-protection startup that keeps personal data out of LLM traffic. Strong full-stack and QA background, so I ship AI that is secure, tested and measurable.

EXPERIENCE

AI Engineer · Asendio May 2025 - Present

AI learning & coaching platform · Full-time · Prishtina, Kosovo

- Lead a team of 4 engineers migrating the platform's live AI coaching agent to a shared multi-tenant agent platform (text, then realtime voice over WebRTC), using side-by-side answer comparison and gradual rollout for a zero-disruption switch.
- Built LLM-powered AI agents and AI call simulation, with tool calling, conversation memory and role-aware context, so learners, team leaders and admins get realistic practice and personalised answers.
- Designed and built the knowledge base and RAG pipeline end to end: secure ingestion, OCR for PDF/Office/audio, chunking, embeddings and semantic search, delivered as scalable, queue-driven Python microservices.
- Built streaming AI content-generation APIs that deliver results to users live over GraphQL subscriptions and WebSockets.
- Evaluated LLM and embedding models, including EU-hosted and open-source options, to drive model choice, cost and data-residency decisions.

Founding Engineer · MaskFlare Jan 2026 - Present

AI data-protection startup

- Building, from zero, a privacy layer for enterprise AI: personal data, secrets and customer records are masked before they reach LLM providers (OpenAI, Anthropic, Gemini, Mistral and more) and restored in the answer.
- Built hybrid PII detection that combines deterministic rules with a local machine-learning NER model, including local-language support, fewer false positives and fail-safe behaviour.
- Extended protection to streaming LLM responses and realtime voice, keeping data safe in every interaction mode.
- Built a secure file-scanning service almost single-handedly (encrypted quarantine, malware detection, explainable verdicts) and browser-level data-loss prevention for ChatGPT and Claude.

Software Engineer · Linkoper Nov 2023 - Present

B2B logistics SaaS · Part-time · Prishtina, Kosovo

- Designed and built a Python/FastAPI order microservice with automated PDF and report generation, containerised with Docker.
- Delivered full-stack features (.NET, Angular) for fleet management and customer onboarding with role-based access (Keycloak).
- Introduced Playwright end-to-end testing and CI on GitHub Actions, improving release reliability.

QA Engineer · Solaborate Mar 2023 - Nov 2023

Telehealth platform · Prishtina, Kosovo

- Tested web and mobile releases across devices and built reusable API test collections that shortened regression cycles.

SKILLS

AI / LLM	LLM agents, tool calling, RAG, embeddings, vector & semantic search, prompt engineering, LLM evaluation, realtime voice AI (WebRTC, LiveKit), NER / PII detection, MCP
LLM providers	OpenAI, Anthropic Claude, Google Gemini, Mistral, open-source models
Languages	Python, TypeScript, Go, C#, JavaScript, SQL
Backend	FastAPI, NestJS, GraphQL, REST APIs, .NET, microservices, message queues, WebSockets
Data & Cloud	PostgreSQL, pgvector, MongoDB, Redis, AWS, Docker, CI/CD (GitHub Actions), OpenTelemetry
Security	OAuth2 / OIDC (Keycloak), multi-tenancy, encryption, data privacy (GDPR)
Testing	pytest, Playwright, regression & parity testing

EDUCATION

BSc Computer Science · UBT - University of Business and Technology 2018 - Present
